N&R (Todmorden) Ltd

# Commenced

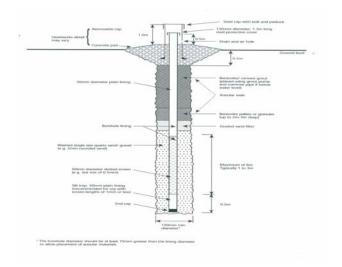

May 2004

## **Key Project Elements**

Desk Study Ground Investigation Environmental Monitoring Landfill Completion Report

PSA Design were commissioned to carry out a desk study for a landfill site nearing closure. Site closure is subject to the procedures outlined in Reg 15 of the Landfill Regulations, which require the preparation of a Closure Report. The Closure Report is a mechanism for the Agency to manage the environmental risk posed by closed waste disposal sites.

The desk study recommended a ground investigation involving rotary cored boreholes both up and downstream of the site and within the waste body, with installation of gas and groundwater monitoring boreholes, collecting soil, groundwater and surface water samples for chemical testing.
